Advantages of Our Artemis Line

Artemis 1 is a lightweight and cost-effective roof coating.

Artemis 2 is a highly reflective and durable 100% acrylic roof coating, enhanced with advanced additives for improved performance.

Artemis 3 is an advanced, fast-curing 100% acrylic roof coating, allowing for application before rain or the application of two coats in a single workday.

Contact us today, to match your choice of Artemis with our Four-Step Method products to complete your project.

The Artemis line of elastomeric roof coatings provides substantial benefits to building owners. Unlike roof replacements, these maintenance coatings can be written off in the current year, while also extending the life of your depreciating roof.

Additionally, these coatings offer energy savings due to their highly reflective surfaces. By creating cooler roofs, they help reduce the heat island effect in cities and enhance the efficiency of solar panels installed on top of them.

Must be applied on sunny days, preferably in the morning hours to provide maximum cure time. Apply with a paint roller or heavy-duty spray equipment. When applied with roller, strokes should be kept in one direction.

Apply the second coat perpendicular to the first. Allow at least 4 hours between coats and 24-48 hours for full cure, dependent upon weather conditions. Relative humidity will directly affect drying/curing time.
